

Attraktion-Control *plus*

Update of the software in the controller

The software in the Attraktion-control.plus is constantly being further developed, expanded and adapted to changing needs. So that the owners of older devices can also participate in this technical progress, the Attraktion-control.plus offers the possibility of updating the software in the control even after delivery.

The update can be done via the Internet or via a micro SD card.

Update via the Internet

To update via the Internet, the control unit must be connected to a LAN network with Internet access (see section "Connecting to the network and the Internet" in the manual).

The update link is located on the website of the device, provided the user is logged in with the service PIN.

Update via micro SD card

The update with a micro SD card requires only a few steps:

1. Download the tar file with the update from the link below:
<https://osfdevices.de/m/tarballs/atplupd.tar>
2. Switch off the power supply to the device completely.
3. Remove the housing cover.
4. If a micro-SD card is already present in the device, you can use it for the update, otherwise you will have to obtain a new micro-SD card from an IT specialist.
5. Copy the update file atplupd.tar to the micro SD card.
6. Insert the micro SD card back into the slot.
7. Close the device cover.
8. Switch the power supply on again.

The update process starts automatically, after which the device is ready for operation again.

Service work

**Electrical connection and service work may only be carried out by a qualified electrician!
Follow the safety instructions.**
